Going to Build a New Home ?

If so, your home should have that distinctive atmosphere which is an expression of individuality and good taste. It should reflect unerringly the personality of its owner. It should be distinguished by its sense of comfort, simplicity and harmony.

Each woman should feel that her home is distinctive—individual. This applies to a small cottage or bungalow as well as to the more pretentious home. To obtain this does not necessarily imply a large expenditure of money, it all depends upon a proper subordination of parts to the whole, a harmonious inter-relationship between the parts, the expressiveness of each of its functions, and, when these are many and diverse, their reconciliation one with another, gives that pleasing sensation to the sense of sight as is given to the sense of hearing by the swelling strains of a great orchestra, with all its beautiful contrasts of tone.

If you are planning to build a new home or business building, do not hesitate to call on or write us—we can give you the best in Architecture, Landscape Gardening and Engineering. No problem is too big for us to solve. Let us design that ten-story office building.
